- 1 We claim:
- 1 1. A method, comprising:
- a) providing an apparatus, comprising an optical fiber having an axis, the optical fiber
- 3 comprising a solid outer cladding region and a core region, the cladding region
- 4 surrounding the core region, wherein the core region contains a plurality of holes
- 5 elongated in the direction of the axis; then
- b) introducing an optically active material into at least one hole, wherein the optically active
- 7 material is adsorbed on an interior surface of the hole; then
- 8 c) propagating a laser beam into the optical fiber; then
- d) detecting the interaction of the laser beam with the material adsorbed on the interior surface of the hole.
- 1 2. The apparatus of claim 1, wherein the optically active material is a Raman active material.
- 3. The apparatus of claim 1, wherein the optically active material is a infrared active material.
- 4. The apparatus of claim 1, wherein the optically active material is a biothreat material
- 5. The apparatus of claim 4, wherein the optically active material is a bacterium.
- 6. The apparatus of claim 4, wherein the optically active material is a nerve gas molecule.
- 7. The apparatus of claim 1, wherein the optically active material is a pollutant material.
- 8. The apparatus of claim 7, wherein the optically active material is carbon monoxide.

- 9. The apparatus of claim 7, wherein the optically active material is a nitrogen oxide.
- 1 10. An apparatus, comprising;
- an optical fiber having an axis, the optical fiber comprising a solid outer cladding region and a
- 3 core region, the cladding region surrounding the core region, wherein the core region
- 4 contains a plurality of holes elongated in the direction of the axis, and wherein at least
- 5 one hole contains optically active material adsorbed on the interior surface of the hole.
- 1 12. The apparatus of claim 10, wherein the optically active material is a Raman active material.
- 1 13. The apparatus of claim 10, wherein the optically active material is a infrared active material.
- 1 14. The apparatus of claim 10, wherein the optically active material is a biothreat material.
- 1 15. The apparatus of claim 14, wherein the optically active material is a bacterium.
- 1 16. The apparatus of claim 14, wherein the optically active material is a nerve gas molecule.
- 1 17. The apparatus of claim 10, wherein the optically active material is a pollutant material.
- 1 18. The apparatus of claim 17, wherein the optically active material is carbon monoxide.
- 1 19. The apparatus of claim 17, wherein the optically active material is a nitrogen oxide.
- 1 20. A system, comprising;
- an optical fiber having an axis, the optical fiber comprising a solid outer cladding region and a
- 3 core region, the cladding region surrounding the core region, wherein the core region

- 4 contains a plurality of holes elongated in the direction of the axis, and wherein at least
- one hole contains optically active material adsorbed on the interior surface of the hole;
- 6 a laser apparatus for introducing laser pump light into the fiber;
- 7 optical apparatus for removing light from the fiber; and
- 8 control means for controlling the laser apparatus.
